Professional Summary

AWS Certified Solutions Architect – Professional with around 10 years of experience driving **DevOps transformation, cloud architecture, and platform engineering** across AWS, Azure, Alicloud, AEM, Rackspace and GCP. Expert in **CI/CD automation, Kubernetes orchestration, Infrastructure as Code (Terraform, Pulumi, CloudFormation), cloud cost governance (FinOps), and DevSecOps practices**. Proven success in **reducing cloud spend by 60%+, cutting disaster recovery time by 70%, and accelerating deployments 10x**.

Skilled in leading **DevOps/SRE teams**, designing **multi-region Kubernetes clusters**, enforcing **cloud governance policies**, and aligning infrastructure with **ISO 27001, SOC2, HIPAA, GDPR, and PCI-DSS**. Adept at building **secure, compliant, and highly available platforms** supporting **50+ microservices and millions of users globally**.

Core Competencies:

- **Cloud Platforms:** AWS (Pro), Azure, GCP, Oracle, AliCloud, Rackspace, Adobe
- **CI/CD & Automation:** Jenkins (shared libraries, EC2 Fleet), GitHub Actions, ArgoCD, CodePipeline, Bamboo
- **IaC & Configuration:** Terraform, Pulumi, CloudFormation, Ansible, Chef, Packer
- **Containers & Orchestration:** Kubernetes (EKS, AKS, GKE), Helm, Docker, ECS, Fargate, Swarm, Nomad, Portainer
- **Security & Compliance:** AWS Security Hub, IDS/IPS, TrendMicro, Qualys, Nessus, PCI-DSS, ISO 27001, HIPAA, SOC2
- **Observability & SRE:** Grafana OnCall, CloudWatch, Splunk, AppDynamics, MTTR optimization, SLO/SLI management
- **FinOps & Cost Optimization:** ARM64 migrations, EC2 Spot/Fleet, OpsLyft, Trusted Advisor, Cost Explorer
- **Emerging Practices:** Platform Engineering, DevSecOps, Service Mesh (Istio/Envoy)
- **Development & Automation Scripting:** Core Java (Collections, Concurrency, Spring Boot), Nodejs, Python, Shell, Ruby, Groovy
- **AI & Automation:** Agentic AI, AI-Assisted Operations, Intelligent Incident Response

Professional Experience

NineDots Client: [Tanami Capital](#) (Contract)

Principal DevOps & Cloud Solutions Architect

— *Fintech Product: Bahrain-based global private markets investment platform*

Nov 2025 - July 2026

Bahrain (Remote)

Key Achievements:

- **Platform Re-Architecture (Serverless → ECS):** Decomposed a monolithic serverless monorepo in which a single failing change could break the entire deployment — migrating first to Elastic Beanstalk with rolling deployments, then to Amazon ECS with worker, service, and scheduled-job tiers separated into independently deployable units — eliminating the single point of failure and enabling per-service release cadence.
- **Migration Assurance:** Gated every migration wave behind a full integration test suite and a one-week production validation cycle before cutover, completing the re-platforming with no customer-facing regressions.
- **Engineering Productivity & CI/CD Automation:** Joined as DevOps lead and built the platform's CI/CD automation from the ground up using GitHub Actions, with automated build, test, and deployment gates. Built dedicated **Terraform infrastructure pipelines with PR-based validation, review, and approval**

workflows, enabling automated and repeatable infrastructure provisioning while reducing manual deployment effort and improving release consistency

- **Edge Security & WAF Engineering:** Designed and implemented AWS WAF rulesets from scratch — rate-based controls, geo-aware rules, bot mitigation, and abuse protection across authentication and OTP endpoints — hardening the platform against credential-stuffing, volumetric, and API-abuse traffic.
- **AI-Assisted Security Operations:** Built an AI agent integrated with the WAF and observability stack that detects anomalous traffic patterns, summarises the situation in plain language for on-call engineers, and proposes candidate WAF rules for human approval before deployment — compressing detection-to-mitigation time while keeping a human in the loop.
- **Infrastructure as Code:** Implemented the entire platform in Terraform, introducing a reusable module library that standardised provisioning across environments and made infrastructure changes reviewable and repeatable, and **reduced provisioning time by ~80%**.
- **Networking & Zero Trust:** Delivered site-to-site VPN connectivity for Saudi Arabia operations to meet organisational and regulatory requirements, plus secure VPN access to internal applications; migrated DNS from Route 53 to Cloudflare with Zero Trust access controls.
- **Observability & Incident Management:** Stood up Grafana Cloud for metrics, logs and traces; Checkly for synthetic health checks and uptime monitoring; and incident.io for incident response — establishing on-call workflows, production incident tracking, and post-incident reviews that fed fixes back into the platform.
- **Multi-Region Migration:** Led the end-to-end migration for the entire production infrastructure from AWS Bahrain (me-south-1) to Frankfurt (eu-central-1) in response to regional availability and geopolitical risk — planning and executing the full cutover end to end with zero data loss and zero customer-facing downtime.
- **Cross-Cloud Portability & Concentration Risk:** Delivered a proof of concept for cross-cloud provider deployment, driven by regional instability affecting Middle East cloud availability — reducing single-provider and single-region concentration risk for a regulated fintech platform and giving the business a documented exit path from vendor lock-in.
- **Cloud Security Posture & Compliance:** Remediated 200+ findings from cloud vulnerability scanning across infrastructure and container workloads — closing misconfigurations, CVEs, and IAM policy gaps — and contributed controls, evidence, and remediation tracking supporting ISO 27001 and SOC 2 compliance.

Tech Stack: AWS (EKS, ECS, Lambda, API GW, WAF, TGW, Secrets Manager, Route53, CloudWatch), Kubernetes, GitHub Actions, Jenkins EC2 Fleet, Terraform, Grafana, Grafana-OnCall, Loki, DataDog, Vault, Python, Redis, PostgreSQL, Azure, GCP.

Scale: Architected multi-cloud workloads across AWS, Azure, and AEM for multi-region & cloud deployments, powering 50+ services and content delivery to millions of global users with FinOps savings of 45–65% and enterprise-grade DR, security, and compliance.

DoodleBlue Client: [Thomson Reuters](#)
DevOps Solution Architect Consultant,

March 2025 - Nov 2025
US/Canada (Remote)

— *Legal, Tax & News, etc Services: Canadian multinational content-driven technology conglomerate*

Key Achievements:

- **AEM Platform Migration & Content Delivery Architecture:** Led the migration of 45 digital properties and web applications from custom AWS-hosted stacks to Adobe Experience Manager as a Cloud Service, re-architecting global content delivery. Owned deployment architecture, Git branching strategy, and software configuration management across the programme.
- **Cross-Team Technical Leadership:** Directed a 20-engineer migration team and coordinated delivery across 10 product and platform teams, defining migration waves, cutover sequencing, environment promotion standards, and rollback criteria to keep 45 properties shipping without service interruption.
- **Source Control & Branching Strategy:** Defined the Git branching and release model underpinning the migration — GitHub repository structure, CODEOWNERS review gates, branch protection, environment-mapped branches, and repository integration with AEM Cloud Manager pipelines — giving 20+ engineers a consistent, auditable path to production.
- **CI/CD Modernization for Content:** Rebuilt content and code delivery pipelines from AWS-native CI/CD onto AEM Cloud Manager pipelines (Code + Config + Content), adding automated validation, environment promotion, cache-purge, and CDN invalidation workflows, and zero-downtime rollouts.

- **Security & Edge Protection:** Implemented WAF rulesets and DDoS protection at the Adobe CDN edge, migrating and re-mapping existing AWS WAF policies — preserving OWASP coverage, rate limiting, and bot mitigation through the platform transition with no regression in security posture.
- **Hybrid Network Architecture & Split Tunneling:** Designed and delivered split-tunnel routing across the AEM Cloud Service estate, separating internal corporate-bound traffic from public internet requests so each path resolved through the correct network. Drove the design and rollout across three organisations — Thomson Reuters' network team, Thomson Reuters' cloud team, and Adobe's network team — aligning VPN and advanced networking configuration, egress IP allow-listing, DNS resolution, and firewall rules to unblock internal integrations without exposing them publicly.

Tech Stack: Adobe Experience Manager as a Cloud Service, AEM Cloud Manager, Adobe CDN/WAF, AWS, GitHub, Git branching & release management, CI/CD automation, Terraform.

Scale: Migrated 45 digital properties serving global web traffic. Led 20 engineers directly and coordinated across 10 teams for a multinational listed enterprise with zero-downtime migration.

[Toddleapp](#)

Lead DevOps Engineer,

— *EdTech Product Company: AI-powered teaching, learning, assessment, reporting, and collaboration platform*

June 2023 - Feb 2025

Bangalore, India (Remote)

Key Achievements:

- **Transformed CI/CD:** Migrated pipelines from GitHub Actions to a Jenkins shared-library architecture with EC2 Fleet spot instances, achieving a 60% cost reduction and 5x faster release cycles.
- **Infrastructure Standardization:** Built immutable infrastructure using Terraform and Packer, automating AMI pipelines and improving disaster recovery readiness by 80%.
- **Database Resilience:** Implemented PostgreSQL RDS monitoring with PGWatch and automated global database synchronization workflows, enhancing query performance by 25%.
- **Cloud Security & Compliance:** Closed compliance gaps by enforcing AWS governance policies, implementing SOC 2 and ISO 27001 standards, and deploying IDS/IPS solutions, reducing audit findings by 90%.
- **BCP & DR Strategy:** Reduced recovery time objective (RTO) from several hours to less than 30 minutes through automated disaster recovery pipelines and SLA-aligned DR reporting.
- **Observability & Incident Response:** Consolidated monitoring into Grafana-OnCall, reducing mean time to resolution (MTTR) by 40%.
- **Secure Workflows:** Designed & Developed NodeJS serverless malware scanning for S3 with Lambda and ClamAV, protecting millions of files with real-time compliance checks.
- **Release & Change Management:** Automated branching, tagging, changelog generation, and audit-ready DR documentation, reducing manual intervention by 70%.
- **Containerization:** Migrated internal applications to Docker Swarm with Portainer, improving deployment speed and scalability across more than 20 third-party workloads.
- **GraphQL Serverless Development:** Designed and optimized GraphQL APIs using AWS Lambda + API Gateway with schema stitching, resolver optimization, and secure role-based access, improving performance by 35% and reducing operational overhead.
- **Backend & Feature Development:** Contributed to Node.js backend development, optimized API queries, improved throughput by 20–30%, and integrated feature workflows into CI/CD pipelines for consistent build and test coverage.
- **GitHub Platform Ownership:** Administered the organisation's GitHub estate across 50+ product repositories — org/team permissions, branch protection and CODEOWNERS review gates, Dependabot and secret-scanning policy, automated release tagging, and reusable GitHub Actions workflows for PR validation and security scanning alongside the Jenkins deployment pipelines — establishing audit-ready change control for SOC 2 and ISO 27001.

Tech Stack: AWS (IAM, EC2, S3, RDS, Lambda, CloudFront, Transit Gateway, WAF), Jenkins, Terraform, Packer, Grafana, Grafana-OnCall, PostgreSQL, Docker, Portainer, ClamAV, SonarQube, IDS/IPS.

Scale: Managed 150+ EC2 nodes across multi-account AWS infra. Supported 50+ microservices with CI/CD pipelines delivering to millions of global users. Led a DevOps team of 6 engineers, driving enterprise DevOps transformation.

[KredX](#)

Lead DevOps Engineer,

— Fintech Product Company: Invoice discounting & supply-chain finance platform

Sept 2022 - June 2023

Bangalore, India

Key Achievements:

- **Cloud Cost Optimization:** Migrated **EKS Workloads, ECS Services and CI/CD pipelines** to **ARM64-based compute**, reducing compute costs by **~45%** while improving build and runtime efficiency.
- **Resilient BCP/DR:** Implemented **Velero-based disaster recovery** for **MongoDB & Apache NiFi** on Kubernetes, achieving **near-zero RPO** and meeting **regulatory compliance** requirements.
- **Deployment Reliability:** Standardized deployments with **Helm + ArgoCD**, achieving **99% success rates** with automated rollbacks and full audit traceability.
- **Security & Compliance:** Resolved **1,500+ AWS Security Hub alerts**, eliminating critical misconfigurations and enabling successful **SOC2 and PCI-DSS audits**.
- **Network Architecture:** Built **multi-account VPC communication** with **Route53 Private Hosted Zones**, reducing cross-service latency by **30%** and securing internal traffic.
- **Proactive Security Posture:** Introduced **compute vulnerability scanning** (Suma-Soft), enabling proactive patching of critical CVEs and strengthening overall cloud security.
- **Operational Stability:** Monitored and troubleshooted daily production issues, ensuring **24/7 uptime** for high-volume fintech workloads.
- **Repository Migration & SCM Business Continuity (GitHub ↔ Bitbucket):** Owned the end-to-end repository migration and mirroring programme for the fintech product org, replicating the primary GitHub organisation into Bitbucket as an audit-compliant DR mirror. Responsibilities: repository inventory and dependency mapping, history-preserving mirror migration (`git clone --mirror / git push --mirror`), Git-LFS object transfer, branch/tag and PR-metadata reconciliation, user and team permission mapping, re-pointing Jenkins and ArgoCD webhooks to the new remotes, scheduled automated sync, and documented cutover/rollback runbooks — delivering near-zero RPO for source code and satisfying SOC2/PCI-DSS audit evidence.

Tech Stack: AWS (EKS, ECS, Lambda, Route53, Security Hub, API Gateway, Transit Gateway), Kubernetes, ArgoCD, Helm, Jenkins, MongoDB, PostgreSQL, Terraform, GitOps, Elasticsearch, Grafana, Grafana Loki, TrendMicro, PingSafe, Suma-Soft, OpenVPN.

Scale: Supported **80+ Kubernetes services** across **multi-account AWS infra spanning 3 regions**. Ensured uptime and security for **high-volume fintech workloads** processing **millions of transactions daily**. Partnered with **cross-functional Dev/QA teams** to drive CI/CD maturity and compliance readiness.

[Locus.sh](#)

DevOps Engineer

— SaaS Product Company: logistics & route-optimisation platform

Dec 2018 - Jul 2022

Bangalore, India

Key Achievements:

- **Global Kubernetes at Scale:** Designed and managed **multi-cloud Kubernetes clusters (EKS, AKS, GKE)** delivering **99.99% uptime** for logistics platforms supporting **50+ microservices** and **10M+ API calls daily**.
- **Cloud Cost Savings:** Drove **30% AWS cost reduction** using **Trusted Advisor, OpsLyft, Cost Explorer**, reserved instance optimization, and workload right-sizing.
- **Database Modernization:** Led **AWS DMS migrations**, consolidating **15+ heterogeneous databases (MySQL, PostgreSQL, MongoDB)** into optimized RDS and DynamoDB, reducing operational overhead by **40%**.
- **Code Quality:** Integrated **SonarQube quality gates** into pipelines, reducing production defects by **25%**.
- **CI/CD Efficiency:** Built **Jenkins master-agent pipelines** on spot instances, scaling dynamically and reducing CI/CD infra costs by **35%** while supporting **200+ builds/day**.
- **Operational Support:** Provided on-call incident response and proactive monitoring via **Opsgenie, PagerDuty, Grafana-OnCall, Splunk, and AppDynamics**, reducing MTTR significantly.
- **Security & Compliance:** Partnered with SecOps to deploy **IDS/IPS (TrendMicro, Qualys, Zscaler)**, ensuring **GDPR, HIPAA, and ISO 27001 compliance**; implemented secure tunnels with **Perimeter81 & OSRM**.

- **Multi-Cloud IaC:** Automated provisioning with **Pulumi + Terraform modules**, accelerating environment builds by **40%** and enabling consistent **multi-cloud deployments (AWS, GCP, Azure, AliCloud)**.
- **Multi-Provider SCM Strategy & Repository Migration (GitHub → Bitbucket):** Planned and executed repository migration and continuous mirroring from GitHub to Bitbucket across the product engineering organisation, covering multi-cloud microservice repositories. Responsibilities: repository discovery and ownership mapping, full-history migration with Git-LFS and submodule handling, access-control and group/SSO mapping, re-pointing CI/CD triggers (Jenkins, GitHub Actions) and container build hooks, automated scheduled sync jobs, plus developer runbooks and migration training — completed with zero developer downtime and no loss of commit history.

Tech Stack: AWS (EC2, RDS, DynamoDB, S3, ELB, Auto Scaling, Lambda, API Gateway, CloudTrail, GuardDuty, WAF, Route53), Kubernetes (EKS, AKS, GKE), GitOps, Zero-Trust, Prometheus, Multi-Cloud Strategy, Jenkins, Pulumi, Terraform, SonarQube, TrendMicro, Qualys, Zscaler, Perimeter81, OpsLyft, Grafana-OnCall, AppDynamics, Opsgenie, PagerDuty.

Scale: Managed **120+ Kubernetes worker nodes** across **3 regions**. Delivered **200+ CI/CD builds daily**, supporting global logistics workloads. Supported **50+ microservices**, processing **10M+ API calls/day** for mission-critical logistics.

FORMAC Inc.

AWS/DevOps Engineer

Client: Facebook / Meta — *Large-scale consumer product development*

Oct 2015 - Apr 2018

California, USA

Key Achievements:

- **CI/CD Transformation:** Built and scaled **enterprise CI/CD pipelines** using **Jenkins, Chef, and Maven**, reducing release cycles from **weeks to days** and enabling **zero-downtime deployments** via **Tupperware + Sandcastle**.
- **Cross-Compiler Toolchains:** Developed **secure cross-compiler pipelines** for **C, C++, and Rust**, integrating **artifact signing & packaging** for ARM/embedded Linux builds.
- **Large Repo Optimization:** Integrated **Git-LFS with Gerrit**, enabling efficient management of **100GB+ repositories** and supporting **5,000+ global developers** with improved repo performance.
- **Enterprise Source Control Migration (Git → Mercurial, 200+ Repos):** Led the migration of 200+ Git repositories onto Facebook's Mercurial-based monorepo tooling, serving 5,000+ developers globally. Responsibilities: repository inventory and classification, history-preserving conversion (hg-git / fast-export), Git-LFS large-object migration, branch and tag mapping, Gerrit code-review workflow transition, Jenkins CI/CD re-pointing, mirroring and rollback strategy, phased wave-based cutover, and developer documentation and enablement — delivered with full commit history preserved and no interruption to daily builds.
- **Build Process Innovation:** Automated patch build workflows (daily, nightly, weekly, hotfix, and production builds) with **traceability dashboards**, reducing manual overhead by **40%**.
- **Configuration Automation:** Authored and standardized **Chef cookbooks, coding guidelines, and deployment documentation**, cutting **onboarding time by 40%** and improving consistency across teams.
- **Monitoring & Reliability:** Deployed **Scooba monitoring** and custom dashboards for proactive infra health checks, improving incident detection and release stability.
- **Repository Resilience:** Designed **Git mirroring pipelines** for disaster recovery and collaboration, ensuring business continuity across environments.
- **Collaboration Enablement:** Automated deployments to enterprise frameworks, ensuring seamless integration for **50+ global product teams**.

Tech Stack: CI/CD (Jenkins, Chef, Maven), Git/Gerrit/Git-LFS, Tupperware, Sandcastle, ARM, Rust, Embedded Linux, Scooba, AppDynamics, SonarQube, Automation Frameworks.

Scale: Supported **500+ containerized workloads** across **Tupperware & Sandcastle orchestration platforms**. Optimized large repos for **5,000+ global developers**. Maintained **build/release systems** for **50+ product teams worldwide**.

Education:

- **M.S. in Computer Science** – Northwestern Polytechnic University, USA, Jan 2015 – May 2016
- **B.E. in Electrical & Electronics Engineering** – Osmania University, India, Oct 2010 – May 2014

Certifications:

- **AWS Certified Solutions Architect - Professional** June 2025 - June 2028
 - Validation number: 9fe96bc3e6cf4f678ddef875d952fc76 ([validate here](#))
- **Kubernetes, Docker, AWS Databases, AWS Cloud, CyberSecurity, and Ethical Hacking** assessment certifications from **LearnTube.ai** (Issued in 2025)
